Extract Icon Tool is a utility that allows you to extract all icons out of the files on your hard drive automatically. I am currently trying to get the following exe working. The tk GUI works fine and everything is set up correctly. However, the "winprog" only processes the first 10% of the file and then stops. Is there any way to get the program to process the entire file? [I am running Windows 10] (not sure if this info is needed or not) exe is a 28MB.exe file. The problem happens when the file size is over 10MB

```
#include "tkApp.h"
int
main(int argc, char **argv) {
char
*fn;
if (argc != 2) {
```
